

Incubator Cover Instructions

Blackout Fabric

1 x 1m x 1.3m (approximately) of fabric

Label.

This new fabric has a black core to give it a blackout feature that is needed for the incubator covers. So it will be 1 piece of fabric for each cover.

It feels very different from cotton and frays so you may need to trim off excessive frayed edges.

It just needs a double hem.

The fabric is heat tolerant, so you can fold and iron a bit at a time and clip/pin to hold the hem in place.

Helpful to use a walking foot to sew, but an ordinary foot will work.

Fold the label in half and stitch it in the hem.

Thank you
